

Colin takes J. J. Keller's **Forklift Safety For Construction** training program right to the jobsite so he can combine it with hands-on instruction.

Forklift Safety For Construction Training Program

It changed our operators' behavior, significantly reducing incidents. —Colin Perkins, Corporate Safety Director

Condon-Johnson & Associates, Inc. — an Oakland, CA-based general engineering contractor specializing in drilling, building foundations and shoring, works on projects ranging from excavation at a missile facility, to soil nailing on mountain sides, to helping replace the massive San Francisco-Oakland Bay Bridge.

Their Corporate Safety Director, Colin Perkins is responsible for everything from training employees to helping procure and maintain safety equipment for the jobsites.

On Condon-Johnson's jobsites, rough terrain forklifts play a major role. So it's crucial that his forklift operators are thoroughly trained and prepared to act quickly in ever-changing conditions.

"Operators don't want to know all the small details of the physics involved," Colin says, *"They just want to know how to operate the equipment correctly and how to use it safely. That's where J. J. Keller's Forklift Safety For Construction training program is such a big help to me. It uses an easy-to-follow format combined with graphics to help operators understand the information and apply it."*

Taking the time to perform necessary pre-operation steps can help determine whether a load is moved successfully or not. Operators have to make adjustments for weight load and dimensions, driving surface and other factors before they begin.

Colin appreciates the way J. J. Keller's **Forklift Safety For Construction** covers important pre-operation steps like inspections, determining center of gravity and reviewing load charts before vehicle use, adding, *"The instructor material guides me through the whole process and removes the guesswork."*

"J. J. Keller products give me a tremendous value for my money. What I need is in one package ... I get instruction tools, certificates, sign-off sheets, and documentation papers — ready to use. Prices are comparable to other companies and J. J. Keller's customer service is unmatched. My rep is just the best. He makes sure that I get what I want, when I want it."

"Getting employees together for training and finding good training resources are two of the biggest challenges of my job," Colin observes. *"My classrooms are the company's worksites. Those locations may sometimes be hard-to-reach, but I know that with J. J. Keller my training presentations will be easy-to-follow."*

Colin's programs involve hands-on training where operators learn on the same equipment they'll use on worksites.

Colin stands at the base of the 8¼ mile-long Bay Bridge. Completed in 1936, a year earlier than the Golden Gate Bridge, it provides access between the San Francisco peninsula and the East Bay. Condon-Johnson is helping to replace this structure with a safer, more up-to-date one.

CC

Helps you satisfy OSHA's 29 CFR §1910.178(l) "formal instruction" requirements.

Forklift Safety For Construction

Use this program to train your operators on a wide variety of forklift topics, including: steering, stability, refueling, surface conditions, pedestrian traffic, and vehicle inspection.

Program includes a high-impact, 22-minute video which demonstrates safe forklift maneuvers to practice on ever-changing driving surfaces, in high wind conditions, and near overhead power lines. Includes a handy training preparation guide filled with timesaving tips and suggestions for more effective training sessions.

JE-226-K ISBN 1-57943-722-2

- The program includes enough materials to train up to 10 operators:**
- 1 22-Minute Closed-Captioned VHS Video
 - 1 Instructor's Guide
 - 1 Training Preparation Guide
 - 10 Operator's Handbooks
 - 1 Training Log
 - 1 Awareness Poster
 - 10 Wallet Cards
 - 10 Operational Evaluation Certificates
 - 10 Training Certificates
 - 10 Daily Checklists
