

"The Handling Hazardous Materials handbook is one hardworking tool. Our drivers really use it."

**- Bill Kennedy
RS Used Oil Services, Inc.**

Handling Hazardous Materials Handbook

This convenient reference is a practical source of word-for-word excerpts of commonly used sections of the Hazmat Regulations and for plain-English summaries of hazmat requirements regarding shipping papers, marking, labeling, placarding, security plans, and more.

It includes the entire Hazmat Table, the List of Hazardous Substances, the List of Marine Pollutants, and the §172.102 Special Provisions. It also includes full-color charts with information on load segregation, markings, labels, and placards as well as a special section on hazardous waste generation and transportation. The book's pages even have "tabbed" edges to help make finding information quick and easy.

8½" W x 11" L. Over 350 pages. Updated twice a year. Available in softbound or spiral-bound versions.

Softbound
HQ-370-H ISBN 1-877798-82-7

Spiral-bound
HQ-370-HSP ISBN 1-590423-081-0

RS Used Oil Services, Inc. in Monee, Illinois collects used oil and contaminated liquids for recycling or disposal in 16 states via their team of nearly 60 drivers.

As their Safety And Regulatory Compliance Director, Bill Kennedy is responsible for RS Used Oil's compliance with DOT's Hazardous Materials Regulations.

"Our company only hires experienced drivers, but even experienced drivers can find the regs complicated and confusing," says Bill.

"One of the challenges our drivers face is understanding the differences between DOT and EPA. The charts, tables and explanations in J. J. Keller's Handling Hazardous Materials handbook help clear things up for them. It's organized so they can quickly and easily find the info they want, plus it's easy to read with such large pages and type."

"At this company, the Handling Hazardous Materials handbook is one hard-working tool. The drivers really use it ... they tab it, write in it, keep it with them."

They use it regularly because it delivers the regs in user-friendly language."

The drivers are very conscientious, and want to do things right. *"They make the extra effort and take the time to find the information,"* Bill observes. *"The drivers are familiar with the handbook and request it. It gives them another reference,*

and we encourage them to review it often, especially during their downtime."

— Bill Kennedy

"Ordering's easy, products are in-stock, and I get them right away. In addition, there's real good follow-up."

Approximately 800 million gallons of used oil are recycled every year, most of which are used as an alternative fuel source in lieu of a natural resource such as diesel or natural gas. There's no doubt that RS Used Oil is providing a valuable function. And with the help of J. J. Keller products like the *Handling Hazardous Materials* handbook, Bill and the company are confident they're doing it safely.

Who should use this reference?

- Dock workers
- Dispatchers
- Operations supervisors
- Shipment preparers
- Drivers (see story at left)
- Shop personnel
- Warehouse and storage personnel

Also makes a terrific training tool!
